BIN ENTRY TECH RESCUE TRAINING

Partnership between

OABA, GEAPS and SATRA

Learn more at oaba.net/events_binentry

When stored grain forms hard bridges, columns and other irregularities, those working to correct it find themselves at risk of becoming trapped inside bins, creating the need for local firefighters to respond.

However, many first responders lack the training necessary to handle these type of situations.

The Bin Entry Tech Rescue training prepares first responders through hands-on training for emergency situations at commercial operations.
